10. Other: ____

Continuation of 5. does NOT place the application in condition for allowance because: of the reasons of record. Applicant argues that the references teach reactants (the two claimed components) as a final product or that they are used for a different purpose. Fact is, the claims only claim two components, i.e. a product of the two components. To meet the claim all the prior art has to do is recite that the two components are together, which the prior art does indeed state. Thus the rejection is proper. The use is not important since the claims are to a composition and the references do state that the components can be simply together and then reacted. This clearly reads on applicant's product which is only a product with the two components. The fact that one or two of the references might have reacted the two components does not negate the fact that the two components were shown in the art as being together in a single composition.
